

Boxxe PLC

Head Office AV & Technology Integration

AudioVisual
Nuway

Project Overview

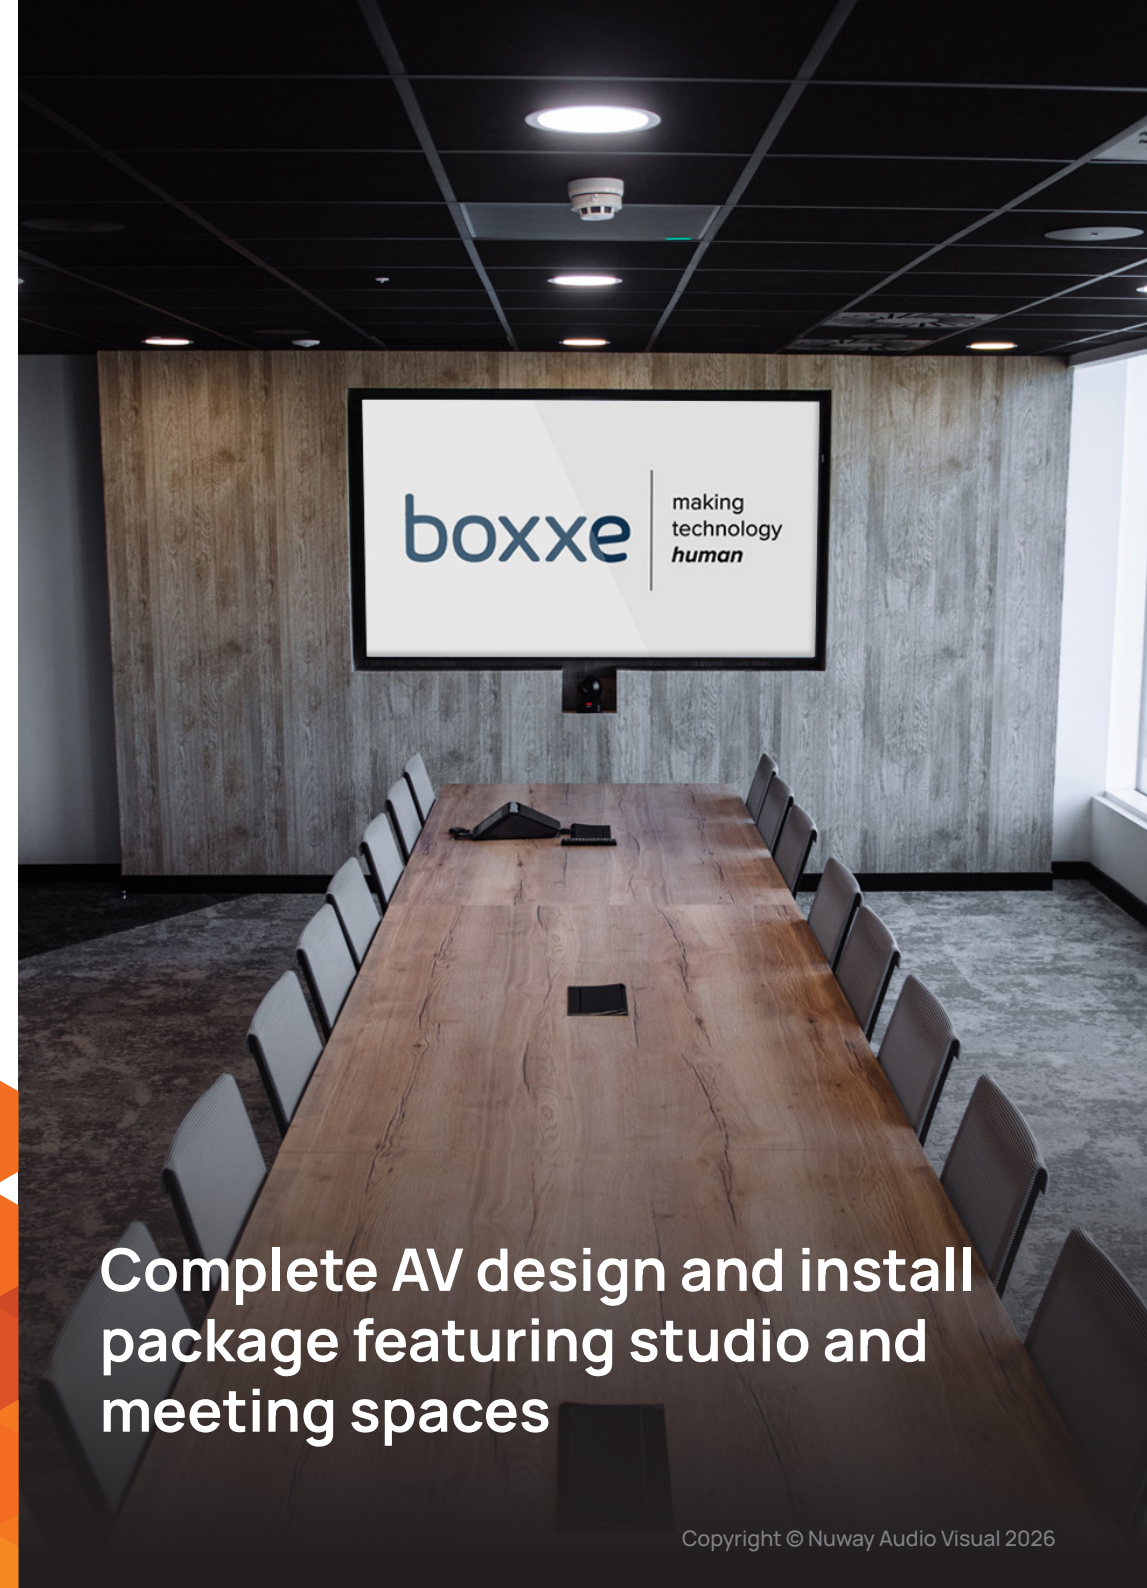

Client: Boxxe PLC

Main Contractor: Building Interiors

Location: York, UK

Sector: Corporate

Scope: Building-wide AV, hybrid meeting spaces, studio, digital signage, room booking and workplace technology

Complete AV design and install package featuring studio and meeting spaces

The Challenge

Following a major rebrand and office relocation, Boxxe PLC set out to create a flagship headquarters that reflected its leadership in IT infrastructure and technology solutions.

The new space needed to support a workforce of over 200 employees while enabling modern, flexible working practices – particularly in response to increased demand for remote collaboration during the Covid pandemic.

Key requirements included:

- Seamless hybrid meeting environments
- A dedicated studio space for content and communication
- Building-wide digital signage and room booking
- Integrated workplace technology, including sound masking and lighting control
- A future-proof, scalable system aligned with the company's technology-led identity

**Scalable and future proof
supporting a workforce of over
200**

Our Solution

Working closely with Boxxe's internal project team and Building Interiors, Nuway delivered a fully integrated AV and communications platform across the entire headquarters.

A high-performance audio system was implemented to support full-capacity live performances, alongside a secondary configuration for smaller, segmented events. Large-format projection and visual systems were integrated to support conferencing and presentation use, ensuring clarity across all layouts.

Hybrid meeting spaces were standardised throughout the building, providing consistent, easy-to-use environments for both in-person and remote collaboration. A dedicated "Studio A" space was created to support internal communications, content creation and broadcast-style output.

Digital signage and room booking systems were deployed across the office to enhance communication and improve space management, while integrated sound masking and lighting control contributed to a more comfortable and productive working environment.

The entire system was designed as a connected, future-ready platform, ensuring scalability as the business continues to grow.

Close collaboration during the design and installation phases ensured seamless integration with the building infrastructure, allowing for efficient delivery and a high-quality finish throughout.

The Result

Boxxe now operates from a technologically advanced headquarters that fully supports hybrid working, internal communication and day-to-day collaboration. The integration of studio capability, digital communication tools and consistent meeting room technology has created a workplace that is both highly functional and aligned with the company's forward-thinking identity.

With ongoing support and training, the system continues to deliver long-term value, ensuring staff can fully utilise the technology and adapt as working practices evolve.

“Nuway provided a first class design and installation service and continues to provide excellent support of the Boxxe Head Office AV systems.”
