

Fingal County Council Chamber AV & Conferencing Upgrade

AudioVisual
Nuway

Project Overview

Client: Fingal County Council

Location: Fingal, Ireland

Sector: Government / Conference

Scope: Council chamber upgrade, conferencing system, voting and AV integration

Overhaul of voting and public address system for councillors and public alike

The Challenge

Fingal County Council required a major upgrade to its chamber facilities following an increase in elected members from 24 to 40, placing new demands on both capacity and technology.

The existing conferencing system, in place for over 14 years, no longer met the Council's operational or technological requirements. The new system needed to:

- Support an expanded number of councillors
- Provide a modern moderated discussion and electronic voting system
- Deliver reliable, high-quality audio and visual performance
- Integrate seamlessly into the chamber environment
- Be delivered within a tight project timeframe

The solution had to combine advanced functionality with proven reliability in a critical civic environment.

Modern electronic voting system delivered in a tight project timeframe

Our Solution

Nuway designed and delivered a fully upgraded chamber conferencing and AV system, centred around a modern digital discussion platform from Televic.

The new system provides integrated microphone, voting, and delegate functionality, enabling structured discussions and secure, efficient decision-making. Designed to accommodate the increased number of councillors, the system ensures consistent audio clarity and ease of use across all positions within the chamber.

The platform was selected for its build quality, flexibility and ongoing development, ensuring long-term reliability and future scalability.

Working to a compressed programme, Nuway successfully delivered a fully bespoke system within a 12-week timeframe — from design through to on-site installation in Ireland.

The Result

Fingal County Council now benefits from a modern, high-capacity chamber environment that supports efficient governance and improved communication. The upgraded system delivers clear, reliable audio, streamlined voting functionality and a significantly enhanced user experience for councillors and operators alike.

Delivered within strict time constraints, the solution provides a future-ready platform that aligns with the Council's operational needs and supports continued technological advancement within the chamber.
